Learning Management without the System

Built on cloud-based, 'serverless' technologies, elastic**Learning** is a standards-compliant, low cost, scalable, highly reliable and secure hosting solution on which you can rapidly deploy your learning modules and make them available to a global audience.

- Customised pages
- Dashboards for reporting
- Rapid implementation
- Fixed, predictable costs
- Dynamic scalability
- Support for a variety of learning content

"The main benefit of elasticLearning for us is the ease-of-use, allowing staff to complete the course at a time that suits them and – at their own pace."

Sue MacSwan,
Office of Rail and Road

Key Features

Customisation

elasticLearning allows you to brand the pages your users access for registration, logging in and viewing your learning content catalogue. You can also customise the data collected from your users during registration, and have it included in reports.

Reporting

Using elasticLearning's built-in dashboards, you can follow your users' progress. You can see when they accessed courses and documents, how much time they spent and whether learners passed or failed tests.

Rapid Implementation

elasticLearning makes it easy for you to make your learning content available to your users. You no longer need to find servers, install a learning management system, or worry about creating a web site. Customisation is rapid and simple, saving you time and effort.

Fixed Cost

With elasticLearning you can have certainty over your costs. You don't need to worry about how many users are accessing your content. Subject to our fair use policy, you can open your site to as many users as you like. Budget with confidence, knowing up-front what the service will cost.

Dynamic Scalability

elasticLearning scales to meet your needs, meaning you never need to worry about slow response times. No more concerns about spikes in usage! elasticLearning dynamically adds resources when they are needed, ensuring your users get a consistent experience.

Learning Content

elasticLearning supports standards-compliant learning materials, including the widely used SCORM formats. It also supports typical document formats, allowing you to host your compliance materials.

---

elasticLearning is built and supported by SkillSet Ltd., headquartered in Basingstoke in the UK. SkillSet provide a full range of education services, including training needs analysis, design and delivery of blended training programmes, implementation and hosting of learning management systems, and ongoing support.
